G6 GROUP

GENDER-BASED VIOLENCE AND FEMICIDE

1

Gender Based-Violence and Femicide Problematic , Disadvantage within the E gov

- 1. Core problem with most current e-panic systems
- Most existing systems (including typical government panic apps) fail at 4 points:
- Single-channel alerts (usually just SMS or basic push)
- No guaranteed delivery + no verification
- No intelligent routing (everyone gets the same alert)
- No structured responder coordination layer
- Weak encryption + inconsistent data standards across responders

2

Solutions to Problem

- A. Device Layer (User App)
- Panic button
- Safety check-in timer (your idea fits here too)
- Silent distress mode
- Continuous location stream (only during active session)
- Team
- Router / native Android + iOS
- Local encrypted storage (AES-256)

3

Positive social impact

- Faster response to GBV incidents
- Reduced time between distress signal and arrival of help
- Reduced impact on domestic violence and kidnapping scenarios, where minutes matter
- Increased perceived safety
- People are more likely to move freely if they know there is a reliable safety net
- Could improve mobility for women at night, students, workers, etc.
- Stronger community safety networks
- Customised responses (if implemented) can:
 - increase better response
 - emergency responders receive information
 - improve their response to specific area

Conclusion

- A GBV safety system like the upgraded e-panic + check-in + crowdsourced response model could be a high-impact public safety tool in both Africa, especially in high-risk and time-sensitive situations where rapid response determines outcomes.
- its main value is shifting safety from reactive reporting to real-time detection and coordinated response, potentially reducing response times, improving coordination between private responders and communities, and strengthening overall situational awareness around GBV incidents.

Get help right now

Call a hotline, send a silent alert to your trusted contacts, or start a safety check-in timer. You decide what to share.

Silent emergency alert

Sends a discreet message to the trusted contacts saved in your safety plan.

Emergency message

I need help. Please contact me.

☒ Share my live location

Helps responders find you. You can disable this any time.

Call a hotline

Emergency services

911 / 999 / 112

G6 Presentation

Solutions

A Device layer (User App)

Faster Response Times

Reducing the critical minutes between a distress signal and arrival of help in domestic violence or kidnapping scenarios.

Increased Mobility

Empowering women, students, and workers to move freely at night with the confidence of a reliable safety net.

Community Safety Networks

Strengthening local vigilance and neighborhood coordination through crowdsourced responder networks.
